SUMMARY

Full-stack Software Engineer with 5+ years of experience building scalable web applications. Skilled at driving technical improvements, automating workflows, and delivering features that align user needs with business goals.

EXPERIENCE

Software Engineer

Nov 2019 – Apr 2025

[MetaRouter](#) - Denver, CO

- Developed and delivered full-stack features (TypeScript, React, Node.js, PostgreSQL) for a web platform routing millions of daily customer events to third-party analytics tools like Google Analytics
- Built an in-app metrics dashboard with New Relic API integration for real-time monitoring, reducing support requests by eliminating manual metric lookups
- Migrated styling to a unified Material UI (MUI) component library, improving UI consistency and accelerating feature delivery
- Designed and maintained a production PostgreSQL database with a GraphQL interface, including schema design and migration management, supporting reliable and scalable data access for core platform features
- Automated database migrations using a custom Docker image, eliminating manual deployment errors and improving reliability across all environments
- Introduced Cypress feature testing into the GitLab CI/CD pipeline, reducing the rate of production errors and time spent on manual QA

EDUCATION

Turing School of Software and Design

Nov 2018 - June 2019

Denver, CO

Full-time 7-month engineering bootcamp that prepares students for a career as a professional software developer

University of Wisconsin-Madison

2013 - 2017

Madison, WI

Bachelor of Science in English

SKILLS

- TypeScript/JavaScript
- React
- Node.js
- PostgreSQL
- GraphQL
- Docker
- Kubernetes
- Terraform
- Cypress/Jest
- Material UI
